

IT PROFESSIONAL / WEB DEVELOPER

Ritvars

Practical technology.
Thoughtful support.

I bring technical support, manual testing and AI-augmented development together to understand problems, build useful tools and improve everyday software experiences.

PROFESSIONAL PROFILE

Support, quality & practical development.

My experience includes a four-year technical support role and two years of manual testing responsibilities. I connect customer needs with technical teams, clear documentation and practical software improvements.

EXPERIENCE HIGHLIGHTS

Technical support & troubleshooting

Multi-channel support for software, accounts and user workflows. Investigated root causes through remote diagnosis, maintained clear CRM records and guided customers toward practical solutions.

Manual testing & delivery support

Planned smoke, sanity, regression and integration checks. Documented reproducible defects and test evidence, retested fixes and worked with developers during system integration and user acceptance testing.

Documentation & mentoring

Created knowledge-base articles, troubleshooting guides and technical requirements. Supported new colleagues, gathered user feedback and tracked issues and improvement requests through resolution.

Lucidchart · Remote support

HOW I WORK

Honest, dependable and considerate. I prefer focused work, listen carefully and make time to help others.

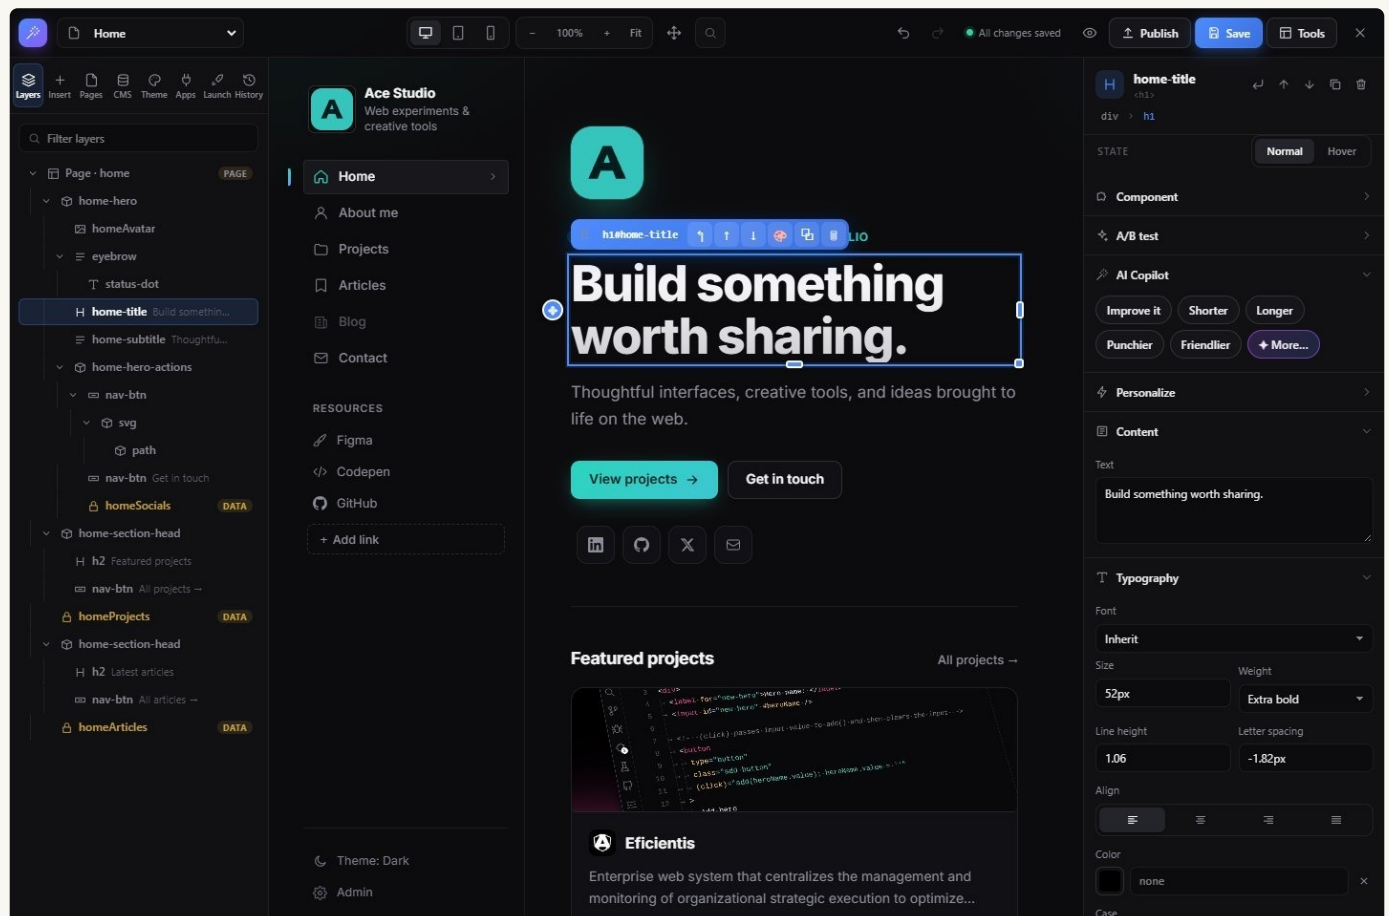

BEYOND WORK

Music discovery and learning DJ mixing; art, photography and Photoshop; hands-on exploration of IT and AI tools.

Career details are intentionally generalized for privacy.

Ace Web Editor

Bring the page, its structure and its styling into one browser workspace, with recoverable changes and portable exports.

Selected headline with page structure, content and typography controls. Sample website.

WHAT THE APPLICATION DOES

Edit across the site. Pages, shared layouts, forms, media and responsive element styles.

Build reusable content. Components, sections and CMS collections in one workspace.

Keep changes recoverable. Saved versions, site backups and standalone HTML or Node.js exports.

TECHNOLOGY

JavaScript · HTML5 · CSS3
IndexedDB · localStorage
Node.js · esbuild · Playwright

Optional cloud, collaboration and AI integrations.

ACTIVE DEVELOPMENT / PRIVATE REPOSITORY

Editing and export workflows are implemented. Recovery is under continued refinement; browser storage powers the demo, and external services need configuration.

WHAT THE APPLICATION DOES

Find relevant listings. Full-text search, category filters, maps and saved searches.

Connect buyers and sellers. Publishing, messages, offers, reservations and timed auctions.

Support marketplace operations. Moderation, account controls, seller tools and analytics.

TECHNOLOGY

Node.js · Express · EJS
JavaScript · HTML · CSS
SQLite / FTS5 · Leaflet
Stripe · Cloudflare
Linux VPS · systemd

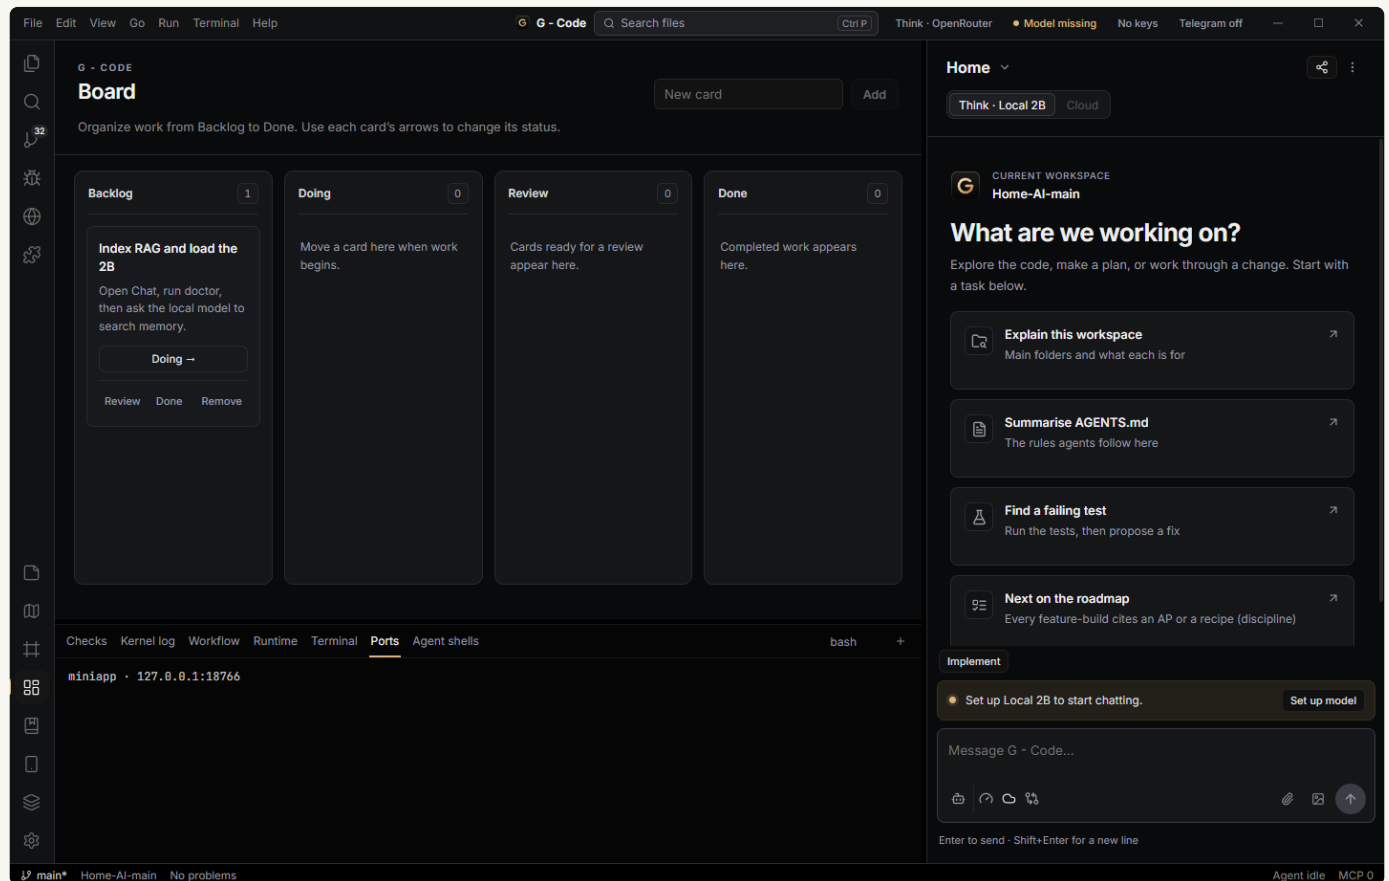

DEPLOYED / ONGOING VALIDATION / PRIVATE REPOSITORY

Deployment, restarts and rollback are documented. Next: outbound email, offsite backups, a restore exercise and real-payment validation. Demo payments use a simulated provider.

G-Code IDE

A local-first workspace that keeps code, conversations, notes and tasks together, with searchable project knowledge.

The persisted Board and conversation workspace. A model must be configured before chatting.

WHAT THE APPLICATION DOES

Work with project context. Monaco editing, file navigation, Quick Open and symbol search.

Keep work close at hand. Draft-safe conversations, attachments, Notes and a persistent Board.

Search local knowledge. SQLite full-text retrieval and adapters for local or hosted models.

TECHNOLOGY

Electron · React · TypeScript
Zustand · Monaco
SQLite FTS5 · better-sqlite3
xterm.js · node-pty
Vite · electron-builder

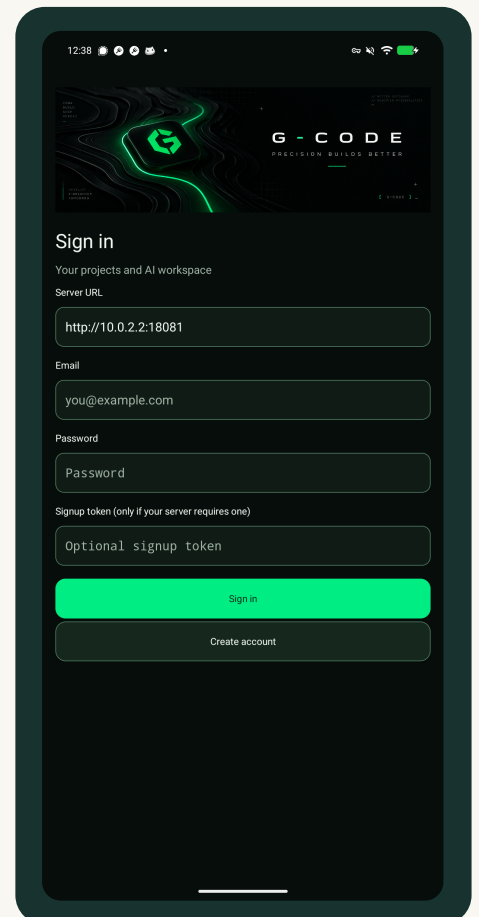

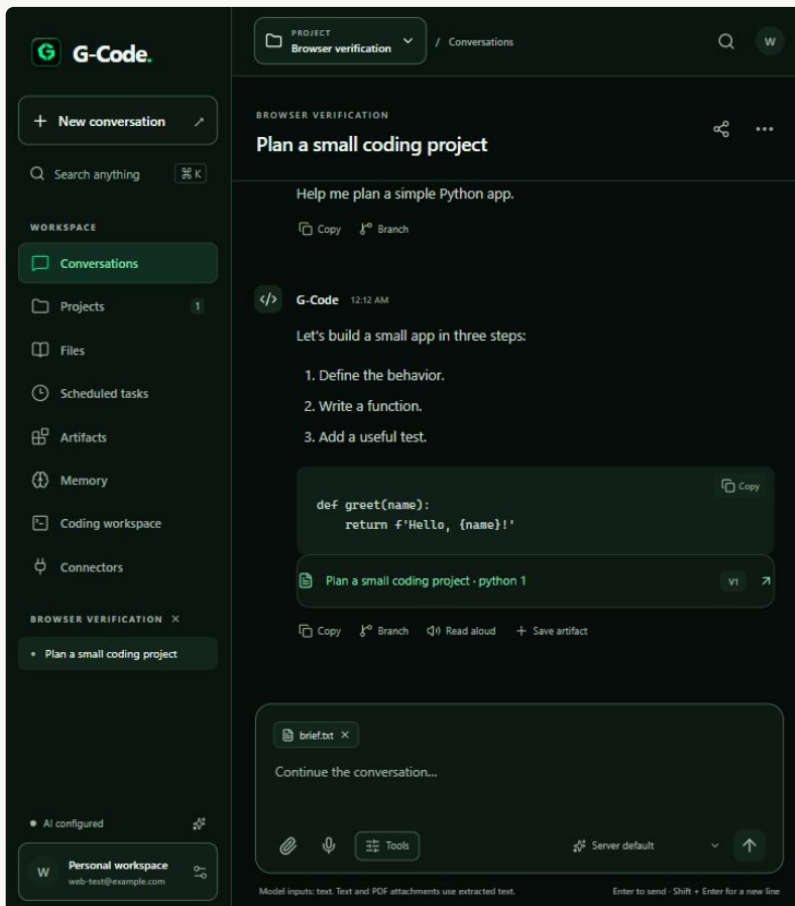

NATIVE PROTOTYPE / PRIVATE REPOSITORY

Core workspace flows are implemented. Release work includes provider and terminal validation, packaged upgrades, accessibility, and outstanding Windows and TypeScript issues.

G-Code

A development workspace spanning project conversations, saved code and reviewable changes, backed by persistent execution history.

Web project workspace (sample content) and native Android sign-in (earlier themed build).

WHAT THE APPLICATION DOES

Keep project work connected. Conversations, files, saved code and persistent run results.

Review before applying. Candidate source changes, revision checks and explicit tool grants.

Run bounded checks. Isolated Python and Node.js jobs with a 120-second execution limit.

TECHNOLOGY

React · TypeScript
Python API · SQLite
Java · Android SDK
Docker · Git · MCP

Separate application from the
Electron-based G-Code IDE.

RELEASE VALIDATION / PRIVATE REPOSITORY

Core workflows and an Android APK are implemented. Live AI quality, HTTPS and current Android device checks remain in validation. Contact Ritvars for a project walkthrough.
